

Asi Lokesh Kumar Reddy

DevOps Engineer

5 Years 3 Months

(+91) 8500594716

lokeshasi2604@gmail.com

Profile Summary

Experienced software professional with 4.5 years in the industry, specializing in DevOps tools such as Git, Ansible, Jenkins, Docker, and Kubernetes. Proven track record in deploying network functions for Jio's services, enhancing customer experiences. Expertise in AWS and GCP cloud platforms has driven impactful project outcomes. Committed to continuous improvement and fostering collaboration within teams.

Education

M.Tech, 2020

National Institute of Technology, Durgapur

B.Tech/B.E., 2016

Jawaharlal Nehru Technological University, Kakinada

Work Experience

Oct 2022 - Present

DevOps Engineer

Jio Platforms Ltd

Led the end-to-end deployment of Jio MANO cloud and Jio AlaaS platforms, automating CI/CD, Docker, and Kubernetes orchestration on bare metal and GCP/AWS VMs. Developed Ansible playbooks, implemented Prometheus/Grafana monitoring, and built/fine-tuned LLM-based AI services with RAG pipelines, optimizing performance, scalability, and reliability while collaborating with cross-functional teams.

Aug 2021 - Oct 2022

DevOps Engineer - Quality Specialist

AMAZON DEVELOPMENT CENTRE

Worked on a Geo-mapping application to accurately locate delivery addresses across Canada, Japan, and Europe using historical data and landmarks. Managed CI/CD pipelines, server monitoring, source code versioning, and automated builds and deployments using Jenkins, GitHub, SVN, and Shell scripts.

Dec 2020 - Aug 2021

Quality Inspector

MIDHANI

Key skills

- Kubernetes
- Docker
- Jenkins
- Ansible
- AWS
- GCP Cloud
- Terraform
- Prometheus
- Grafana
- GIT
- WireShark
- Ai Prompting
- Shell Scripting
- Linux

Personal Information

City Hyderabad

Country INDIA

Languages

- Hindi
- Telugu

Social links

www.linkedin.com/in/asi-lokesh-reddy-7a7467343

Worked at Mishra Dhatu Nigam Limited (MIDHANI) in production of superalloys, titanium alloys, and special steels. Inspected and verified raw materials and finished products as per specifications and standards. Conducted NDT and metallurgical tests including UT, LPT, DPT, and metallography. Monitored manufacturing processes to ensure adherence to quality control procedures. Maintained inspection reports, test records, and quality documentation as per QA standards.

Projects

743 Days

Jio AlaaS (In-house Cloud AI Platform)

Led the end-to-end design, integration, and deployment of the Jio AlaaS in-house cloud AI platform, enabling scalable and secure AI service delivery. Built and integrated LLM-based AI services, ensuring smooth interaction between data ingestion, model inference, and application layers. Tested, validated, and fine-tuned Large Language Models (LLMs) using prompt engineering, fine-tuning, and RAG workflows across multiple knowledge bases. Designed and managed knowledge pipelines for structured and unstructured data ingestion, indexing, and retrieval. Monitored and optimized model performance, latency, and resource utilization (CPU, memory, GPU) on GCP, implemented performance benchmarking, scalability testing, and reliability checks, and collaborated with cross-functional teams to address deployment challenges, improve model efficiency, and ensure compliance with internal standards and best practices.

1169 Days

Jio Telco Cloud Platform

Led the end-to-end integration and deployment of the Jio MANO cloud platform, automating release deployment for 32 microservices using Jenkins on RHEL VMs and performing end-to-end testing. Deployed 5G Network Functions (NFs) on Docker in Replica and Production environments, troubleshooting deployment issues. Developed Ansible playbooks for configuration management, managed ticketing and issue tracking with OSTicket and Phabricator, automated report generation, and maintained product documentation repositories. Created and deployed Kubernetes manifests to orchestrate 5G NFs on bare metal servers and GCP VMs, and implemented Prometheus and Grafana for real-time monitoring, reducing MTTR for critical incidents.

426 Days

Geo-Mapping & DevOps Automation Platform

Worked on a Geo-mapping application to accurately locate delivery addresses across Canada, Japan, and Europe using historical delivery data and user-provided landmarks. Monitored quality and performance metrics, performed root-cause analysis, and implemented improvements in compliance with SOPs. Managed server health, source code versioning, build releases, and deployments using GitHub, SVN, and Jenkins CI/CD, resolved merge conflicts, and developed Shell scripts to automate builds, deployments, and routine operational tasks.

Certification

- Terraform for Google Cloud
- Advanced Git and Github Practices
- Cloud-Native Development with OpenShift and Kubernetes Specialization
- Certified Kubernetes Administrator (CKA) Cert Prep
